

# MAINTENANCE GUIDE

# PREVENTATIVE MAINTENANCE

Prevention is always better when it comes to floor wear. Installing barriers like coir matting inside and outside all external doorways and always wiping up any spilt liquids with a damp cloth is a good place to start. Avoid using aggressive cleaners; they damage or dull the surface and leave a dangerous slippery film. Sticking felt pads under the legs of all furniture you have and ensuring you lift heavy pieces instead of dragging them will also save you maintenance time in the future.

## **REGULAR CLEANING**

### **REGULAR DRY CLEANING**

To prevent any hard particles from building up on your flooring, regularly dust your floors with a non-abrasive, lint-free mop. Microfibre mops like the Vileda Spray Pro Inox Mop Kit are great for both dry and wet cleaning of your floors and will help you maintain the look of the high sheen levels.

#### **REGULAR DAMP CLEANING**

We recommend Eco **Wash Care**, an environmentally friendly, PH neutral floor cleaning system designed for everyday cleaning of oiled and lacquered wooden floors for regular damp cleaning. Paired with a Vileda Spray Pro Inox Mop Kit, you can be assured your flooring will be gently and thoroughly cleaned and dirt repellent.

# REGENERATION

#### **CARE & REGENERATION**

**Wax Care** is an excellent solution that will regenerate and freshen up worn oiled oak floor surfaces while simultaneously improving wear protection. To use, apply Wax Care on a dust-cleaned floor and rub evenly with a cloth – let dry and polish with a cloth. We suggest doing this every three months or as required. In very high traffic areas, this could be necessary monthly or weekly. In larger rooms, apply the solution via a slowly rotating buffing machine.

## **INTENSIVE CLEANING**

Eco **Magic Cleaner** is recommended for intensive cleaning of heavily worn oak floor surfaces. To remove surface stains, put a small quantity of Eco Magic Cleaner on your floor and leave for 5-10 minutes, then wash off with clean water. Be careful not to use steel wool, microfibre or abrasive cleaner when using Eco Magic Cleaner. After using magic cleaner, you should apply a protective coat of either maintenance oil or hard wax oil, depending on wear.
